

Bhadar Kathiya Ghanchi Samaj Portal

Project Workflow — Admin Panel & Public Website

1. What This Document Covers

This document explains, in plain terms, how the BKGS Portal works today: what a visitor sees on the public website, what an administrator can do in the admin panel, and how the two are connected. It covers everything currently built (Phase 1 – Foundation, Phase 2 – Samaj-wide content modules, Phase 3 – district-wise access control) and lists what is planned for later (Phase 4) but not yet built.

3. Public Website Workflow
4. Admin Panel – Login
5. Admin Panel – Dashboard
6. Admin Panel – Content Modules
7. District-Wise Access (Who Sees What)
8. How Content Reaches the Website
9. Roles Summary
10. What's Planned Next (Phase 4)

2. The Big Picture

The Portal has two sides that share one database:

- **The Public Website** — what any visitor can see without logging in. It is read-only: visitors browse content, they cannot change anything.
- **The Admin Panel** — a password-free, OTP-protected back office where authorised people manage everything that appears on the public website.

The rule that connects them is simple: **whatever an admin creates and marks as Active/Published in the admin panel appears automatically on the public website** — there is no separate "publish" button beyond setting that status.

3. Public Website Workflow

A visitor's journey through the site, page by page:

Home Page (/)

- Hero banner with the Samaj's name, tagline and a call-to-action button
- An "About Our Community" summary with a link to the full About page
- Community highlights (e.g. "5000+ Members", "25+ Districts") pulled from Settings
- A card for each active district, linking to the full District List
- Latest News (most recent 3 published articles) and the next Upcoming Event — both pulled live from the database; if nothing is published yet, a friendly "nothing posted yet" message shows instead of an empty section
- A Contact section with address / phone / email, pulled from the Contact Information page

About Samaj (/about)

The Samaj's full history/mission text, written and edited by an admin through the CMS.

District List (/districts)

A card for every active district with its name and description.

News (/news , /news/<article>)

A list of published articles; clicking one opens the full article.

Events (/events , /events/<event>)

Upcoming events and a short history of past events; clicking one shows venue, date/time and full details.

Raja Chithi (/raja-chithi)

Formal Samaj-issued circulars/notices, most recent first, each with its issue date and an attachment link where provided.

Downloads & Rules and Regulations (/downloads)

Documents grouped by category — Rules & Regulations, Forms, Circulars, Other — each a direct download link.

Gallery (/gallery , /gallery/<album>)

A grid of photo albums; opening one shows every photo in that album with captions.

Contact Us (/contact)

Address, phone, email and office hours, all editable by an admin without touching code.

Every page above also shows the district a piece of content belongs to when relevant, or "Samaj-wide" when it applies to everyone.

4. Admin Panel – Login

There is no password to remember. Logging in is a two-step, one-time-code flow:

1. **Go to /admin/login** and enter your registered email address.
2. **Click "Send OTP."** The button shows "Sending..." while a 6-digit code is emailed to that address. The screen then shows only the code entry box — the email field disappears so there's no confusion about which step you're on.
3. **Enter the 6-digit code** and click "Verify & Sign In." A wrong or expired code shows an error and lets you try again (up to 5 attempts before you must request a new code); after 10 minutes an unused code expires automatically.
4. **Didn't get it?** Use "Resend OTP" (limited to once every 60 seconds) or "Change email" to start over with a different address.
5. **Signed in** — you land on the Dashboard. A session stays active for 24 hours or until you click Logout.

5. Admin Panel – Dashboard

The first screen after login. Three summary cards:

- **Total Districts** — how many districts exist
- **Total Members** — how many member records exist
- **Total Events** — how many events exist

For a District Admin (see Section 7), the Members and Events counts only reflect their own district plus anything Samaj-wide.

6. Admin Panel – Content Modules

Every module below follows the same simple pattern: a list screen, an Add button, an Edit button per row, a Delete button (with a confirmation), and a status toggle to publish/unpublish or activate/deactivate a row without deleting it.

Module	What an admin manages	Where it appears publicly
Districts	Name, description, display order, active/inactive	Home page district cards, District List page
Members	Name, gender, date of birth, phone, email, address, photo, district, status (Pending/Active/Inactive)	Not shown publicly yet — feeds the Committee module and future member-facing features
Committee	Positions (e.g. President, Secretary) per district or Samaj-wide; assigning a Member to a position with a term start/end date; removing an assignment	Not shown publicly yet — planned for district pages in a later update
Events	Title, description, district, venue, start/end date & time, banner image, published status	Events page, event detail page, Home page's Upcoming Event
News	Title, excerpt, full rich-text article, publish date/time, published status	News page, article page, Home page's Latest News

Raja Chithi	Title, description, district, issue date, attachment, published status	Raja Chithi page
Downloads	Title, category (Rules & Regulations / Forms / Circulars / Other), file link, district, display order, active status	Downloads page, grouped by category
Gallery	Albums (title, cover image, district) each holding any number of photos (image, caption, order)	Gallery page and album pages
Notifications	Title, message, intended audience (Everyone / One District / One Role), an optional link	Shown as a banner across every admin screen; not yet pushed to the public site or a mobile app (planned for Phase 4)
CMS	Home Banner text/button, About Samaj text, Contact Information (address/phone/email/hours), and General Settings (site name, tagline, footer text, homepage highlights)	Home page, About page, Contact page, site-wide footer
Profile	Your own display name (there is no password to change — login is OTP-only)	—

7. District-Wise Access (Who Sees What)

The admin panel supports four levels of access:

Role	What they can see and manage
Super Admin / Admin / Editor	Everything, every district, no restrictions.
District	Only records that belong to their own assigned district, plus anything marked Samaj-

Admin

wide. They cannot open, edit, or reassign another district's Member, Committee, Event, Raja Chithi, Download, or Gallery record — even by typing its direct link. When they create a new record, it is automatically saved under their own district regardless of what they select.

This scoping is enforced on every relevant module (Members, Committee, Events, Raja Chithi, Downloads, Gallery). News and Notifications are Samaj-wide only and are not district-restricted.

8. How Content Reaches the Website

A typical content flow, using an Event as the example:

1. An admin (or a District Admin, for their own district) opens **Admin Panel** → **Events** → **Add Event**.
2. They fill in the title, date, venue, description and (if applicable) select a district, then tick "Published" and save.
3. The event is written to the database immediately.
4. The next time anyone visits the public **/events** page — or the Home page, if it's the next upcoming event — it appears automatically. No further action is needed.
5. Unticking "Published" (or using the status toggle on the list screen) removes it from the public site immediately without deleting the record, so it can be brought back later.

Every other content module (News, Raja Chithi, Downloads, Gallery, Districts, CMS pages) works the same way.

9. Roles Summary

Role	Typical use
Super Admin	Full control; the account the Samaj committee uses centrally.
Admin	Full day-to-day management, same reach as Super Admin.

Editor	Full reach, intended for content-focused staff (news, events, gallery) rather than account/settings administration.
District Admin	A district committee member managing only their own district's Members, Committee, Events, Raja Chithi, Downloads and Gallery.

10. What's Planned Next (Phase 4)

Designed but intentionally **not built yet**, so the site stays simple until the Samaj is ready for it:

- Public **Membership Registration** — members signing themselves up, with an admin approval step
- **Business Directory** — members listing their businesses
- **Matrimonial** — with privacy/visibility controls built in from the start
- **Blood Donation registry**
- **Scholarship programs and applications**
- **Donations** (campaigns and individual contributions)
- **Mobile App API** — so Notifications and all the above can reach a phone app, not just the website

Bhadar Kathiya Ghanchi Samaj Portal — Project Workflow Document. Reflects the system as built through Phase 3 (Foundation, Samaj-wide content modules, district-wise access control).
